

IMPORT DATA USING TRANSFORM MAPS (SPREADSHEET)

Description:

This project focuses on importing structured employee data from an external spreadsheet into the ServiceNow platform using Import Sets and Transform Maps. The project simulates a real-world scenario where employee data is received in Excel format and needs to be imported into ServiceNow efficiently and accurately.

The spreadsheet data is first loaded into an Import Set table, which acts as a staging area. A Transform Map is then configured to map the source fields to the corresponding fields in the target table. After transformation, the employee records are created or updated in the target table.

The project also uses Coalesce to prevent duplicate records and update existing employee information. Finally, Reports and Dashboards are created to analyse and monitor employee data.

PHASE 1: Prepare the Spreadsheet

Steps:

1. Open Google Spreadsheet.
2. Create a new spreadsheet.
3. Enter the employee data with the required fields.
4. The spreadsheet contains the following fields:
 - Employee ID
 - Employee Name
 - Email
 - Department
 - Location
5. Enter sample employee records in the spreadsheet.
6. Download the spreadsheet in **Microsoft Excel (.xlsx)** format.
7. Save the file as **Sample Spreadsheet.xlsx**.

Sample Spreadsheet:

PHASE 2: Create New Custom Table

In this phase, a custom table is created in ServiceNow to store the employee information imported from the spreadsheet.

Navigation:

Application Navigator → Tables → Create New

Table Details:

Label: Employee Test

Name: u_employee_test

After creating and saving the table, open the table form.

Create Employee ID Field

1. Click **Show Form**.
2. Open **Form Context Menu / Additional Actions**.
3. Select **Configure → Form Layout**.
4. Click **New** to create a new field.
5. Enter the following details:

Column Label: Employee ID

Type: String

6. Click **Add**.

Create Remaining Fields

Create the following fields using the same procedure:

Field	Type
Employee ID	String
Employee Name	String
Email	String
Department	String
Location	String

- Click **Save**.
- Verify that all fields are displayed in the Employee Test table.

Employee Test Table

Employee Test Fields

The screenshot shows the 'Table' configuration page in ServiceNow. The 'Label' is 'Employee Test' and the 'Name' is 'u_employee_test'. The 'Application' is set to 'Global'. The 'Create module' and 'Create mobile module' checkboxes are checked. The 'Add module to menu' dropdown is set to '-- Create new --'. The 'New menu name' is 'Employee Test'. The 'Remote Table' checkbox is unchecked.

Below the configuration fields, there is a 'Columns' tab. The 'Table Columns' section shows a list of columns for the table. The columns are:

Column label	Type	Reference	Max length	Default value	Display
Employee ID	String			false	false
Employee Name	String			false	false
Email	String			false	false
Department	String			false	false
Location	String			false	false

Phase 3: Import Set Table

Navigation:

In Application Navigator → Load Data

Click on **Load Data** to create an Import Set Table.

Fill in the details as shown below:

- **Label:** Employee Import
- **Name:** u_employee_import *(auto populated)*

servicenow All Favorites History Workspaces Load Data Search

Phase 4: Create Transform Map

Navigation:

After creating the **Import Set Table**, click on **Create Transform Map**.

A Transform Map is used to map the fields from the **Source Table (Employee Import)** to the **Target Table (Employee Test)**.

Steps:

1. Click on **Create Transform Map**.
2. Fill in the details as shown below:

- **Name:** Sample Spreadsheet Import
- **Source Table:** Employee Import
- **Target Table:** Employee Test

The screenshot shows the 'Table Transform Map' configuration page. The 'Name' field is highlighted with a red box and contains 'Sample Spreadsheet Import'. The 'Source table' dropdown is set to 'Employee Import [u_employee_import]'. The 'Target table' dropdown is set to 'Employee Test [u_employee_test]' and is also highlighted with a red box. Other fields include 'Application' (Global), 'Created' (empty), 'Order' (100), and 'Run script' (unchecked). At the bottom, there is a 'Submit' button and a 'Related Links' section with a link to 'Auto Map Matching Fields' highlighted with a red box.

3. Click on **Auto Map Matching Fields**.
4. The matching fields will be mapped automatically between the source and target tables.
5. If required, click on **Mapping Assist** to manually map the fields.

Field Mapping:

Source Table – Employee Import Target Table – Employee Test

Employee ID	Employee ID
Employee Name	Employee Name
Email	Email
Department	Department
Location	Location

6. Verify that all the required source and target fields are mapped correctly.

7. Click on **Save**.

ServiceNow	test8@gmail.com	SB-0008	Prashanth Reddy	Hyderabad
ServiceNow	test4@gmail.com	SB-0004	Ajeet Kumar	Hyderabad
Salesforce	test12@gmail.com	SB-0012	Rakesh Bhoomari	Hyderabad

Once the transformation is completed, verify that the **success message** is displayed.

Next, open the **Employee Test** table from the Application Navigator.

Verify that the employee records from the spreadsheet have been successfully imported into the target table.

Employee ID	Employee Name	Email	Department	Location
SB-0003	Meghana Katoju	test3@gmail.com	ServiceNow	Hyderabad
SB-0001	Ratan Kumar	test1@gmail.com	ServiceNow	Hyderabad
SB-0015	Srinu Nandipalli	test15@gmail.com	ServiceNow	Hyderabad
SB-0011	Abhishek S	test11@gmail.com	Salesforce	Hyderabad
SB-0007	Yaswanth Nikku	test7@gmail.com	ServiceNow	Hyderabad
SB-0010	Ravi Teja	test10@gmail.com	ServiceNow	Hyderabad
SB-0006	Sushma Ganji	test6@gmail.com	ServiceNow	Hyderabad
SB-0002	Sandeep Guja	test2@gmail.com	ServiceNow	Hyderabad
SB-0014	Sushanth J	test14@gmail.com	Salesforce	Hyderabad
SB-0013	Mounika K	test13@gmail.com	Salesforce	Hyderabad
SB-0009	Praneeth S	test9@gmail.com	ServiceNow	Hyderabad
SB-0005	Bitla Sai Prasad	test5@gmail.com	ServiceNow	Hyderabad
SB-0008	Prashanth Reddy	test8@gmail.com	ServiceNow	Hyderabad
SB-0004	Ajay Kumar	test4@gmail.com	ServiceNow	Hyderabad
SB-0012	Rakesh Bhoomani	test12@gmail.com	Salesforce	Hyderabad

If required, use **Personalize List Columns** to arrange the fields and click **OK**.

Final Result:

All employee records are successfully imported into the **Employee Test** table using the Import Set and Transform Map.

Phase 6: Enable Coalesce to Avoid Duplicate Records

Navigation:

Open the created Transform Map – **Sample Spreadsheet Import**.

Go to the **Field Maps** section.

Name	Source table	Target table	Run business rules	Order	Active	Updated
Sample Spreadsheet Import	Employee Import [u_employee_import]	Employee Test [u_employee_test]	true	100	true	2026-01-19 03:46:08
Employee Job Profile Transform Map	Employee Job Profile Staging [sn_employee_position_std]	Employee Job Profile [sn_employee_position]	true	100	true	2023-02-21 21:00:47
Target Import	Target Import Set [imp_sn_gl_goal_target]	Target [sn_gl_goal_target]	true	100	true	2022-06-29 08:41:47
Goal Import	Goal Import Set [imp_sn_gl_goal]	Goal [sn_gl_goal]	true	100	true	2022-06-29 06:06:40
Google Example	label [elc_google_import]	User [sys_user]	true	100	true	2018-02-06 13:42:44
Okta Example	label [elc_okta_import]	User [sys_user]	true	100	true	2018-02-02 14:21:44
Acure AD Example	label [elc_acure_ad_import]	User [sys_user]	true	100	true	2018-02-02 14:18:38
Auth0 Example	label [elc_auth0_import]	User [sys_user]	true	100	true	2018-02-02 14:04:26
ADFS Example	label [elc_adfs_import]	User [sys_user]	true	100	true	2018-02-02 10:58:24

Find the **Employee ID** field and enable **Coalesce** by setting it to **True**.

Source field	Target field	Coalesce
u_name	u_employee_name	false
u_employee_id	u_employee_id	true
u_department	u_department	false
u_location	u_location	false
u_email	u_email	false

Click on **Save**.

Purpose of Coalesce:

Coalesce helps to identify existing records using the **Employee ID** field. If the Employee ID already exists, the existing record can be updated instead of creating a duplicate record.

PHASE 7: Inserting New Data in Excel Format

After enabling **Coalesce**, add new employee records to the Excel spreadsheet.

Steps:

1. Open the Excel spreadsheet used for importing employee data.
2. Add a **new employee record** with a new **Employee ID**.

3. Save the Excel file.
4. Go to **Load Data** in ServiceNow.
5. Upload the updated Excel file.
6. Run the **Transform** process using the existing Transform Map.
7. Open the **Employee Test** table and verify the new employee record.

Testing Coalesce:

- If a **new Employee ID** is added, a **new record** is inserted.

Employee ID	Name	Email	Department	Location
SB-0001	Ratan Kumar	test1@gmail.com	ServiceNow	Hyderabad
SB-0002	Sandeep Guja	test2@gmail.com	ServiceNow	Hyderabad
SB-0003	Moghana Katoju	test3@gmail.com	ServiceNow	Hyderabad
SB-0004	Ajay Kumar	test4@gmail.com	ServiceNow	Hyderabad
SB-0005	Bitla Sai Prasad	test5@gmail.com	ServiceNow	Hyderabad
SB-0006	Sushma Ganji	test6@gmail.com	ServiceNow	Hyderabad
SB-0007	Yaswanth Nikku	test7@gmail.com	ServiceNow	Hyderabad
SB-0008	Prashanth Reddy	test8@gmail.com	ServiceNow	Hyderabad
SB-0009	Praneeth S	test9@gmail.com	ServiceNow	Hyderabad
SB-0010	Ravi Teja	test10@gmail.com	ServiceNow	Hyderabad
SB-0011	Abhishek S	test11@gmail.com	Salesforce	Hyderabad
SB-0012	Rakesh Bhoomani	test12@gmail.com	Salesforce	Hyderabad
SB-0013	Mounika K	test13@gmail.com	Salesforce	Hyderabad
SB-0014	Sushanth J	test14@gmail.com	Salesforce	Hyderabad
SB-0015	Srinu Nandipati	test15@gmail.com	ServiceNow	Hyderabad

- If an **existing Employee ID** is added with changed information, the existing record is **updated**.
- If the same data is imported again without changes, it is **ignored** rather than creating a duplicate.

PHASE 8: Create Reports on Employee Test Table

Create reports using the employee records available in the **Employee Test** table.

Report 1: Employees by Department

- Open **Reports** → **Create New**
- Select the **Employee Test** table.
- Select **Pie Chart** as the report type.
- Set **Group by**: Department
- Set **Aggregation**: Count
- Enter the report name as **Employees by Department**.
- Click **Save**.

Activate Windows

Report 2: Employees by Location

- Create another report using the **Employee Test** table.
- Select **Bar Chart** as the report type.
- Set **Group by:** Location
- Set **Aggregation:** Count
- Enter the report name as **Employees by Location**.
- Click **Save**.

These reports help to view and analyse employee information based on **Department**, **Location**, and employee details.

PHASE 9: Add Reports to Dashboard

After creating the reports, add them to a dashboard to view the employee information in one place.

Steps:

1. Open **Self-Service** → **Dashboards**.

2. Create a new dashboard.
3. Enter the dashboard name as **Employee Analytics Dashboard**.

 - **Employee List Report**

Access Control

pa_dashboards

Type: record

Operation: create

Decision Type: Allow if

Apply to: Add Filter Condition, Add OR Clause

Conditions

Access Control Rules have two decision types, and these types will behave differently depending on conditions.

1. Allow Access: Allows access to a resource if all conditions are met. Additional ACLs may grant access to records where this ACL has not granted access.

2. Deny Access: Denies access to a resource unless all conditions are met. Additional ACLs may not grant access to records where this ACL has denied access.

More info

7. Arrange the reports on the dashboard as required.
8. Save the dashboard.

Final Result:

The dashboard displays the employee reports together, making it easier to view and analyse the imported employee data.

Conclusion:

1. This project successfully implemented employee data management using **ServiceNow Import Sets and Transform Maps**, providing an efficient way to import and manage employee information.
2. **Coalesce** was enabled on the **Employee ID** field to identify existing records and prevent duplicate entries. This allows existing employee information to be updated during repeated imports.
3. **Reports and Dashboards** were created to analyse employee data, including department-wise and location-wise employee information and employee records.
4. These reports were added to an **Employee Analytics Dashboard**, providing a centralized view of employee data and making it easier to monitor and analyse the imported information.
